

1. The first group of respondents (Group 1) consisted of 100 individuals who were
 2. selected from a random sample of the general population. They were asked to
 3. provide information on their demographic characteristics, including age, gender,
 4. and education level. Additionally, they were asked to report on their current
 5. employment status and income level. The data collected from this group was
 6. used to establish a baseline for the study.

7. The second group of respondents (Group 2) consisted of 100 individuals who
 8. were selected from a random sample of the general population. They were asked
 9. to provide information on their demographic characteristics, including age, gender,
 10. and education level. Additionally, they were asked to report on their current
 11. employment status and income level. The data collected from this group was
 12. used to establish a baseline for the study.

13. The third group of respondents (Group 3) consisted of 100 individuals who
 14. were selected from a random sample of the general population. They were asked
 15. to provide information on their demographic characteristics, including age, gender,
 16. and education level. Additionally, they were asked to report on their current
 17. employment status and income level. The data collected from this group was
 18. used to establish a baseline for the study.

19. The fourth group of respondents (Group 4) consisted of 100 individuals who
 20. were selected from a random sample of the general population. They were asked
 21. to provide information on their demographic characteristics, including age, gender,
 22. and education level. Additionally, they were asked to report on their current
 23. employment status and income level. The data collected from this group was
 24. used to establish a baseline for the study.

25. The fifth group of respondents (Group 5) consisted of 100 individuals who
 26. were selected from a random sample of the general population. They were asked
 27. to provide information on their demographic characteristics, including age, gender,
 28. and education level. Additionally, they were asked to report on their current
 29. employment status and income level. The data collected from this group was
 30. used to establish a baseline for the study.
